Infrared remote control signal test instrument

JCY01 infrared signal instrument is our company's product for test remote control. It can test for infrared remote control and distinguish if the remote control works. With its small dimension and beautiful shape, it is easy to take and convenient to use. It is a necessary tool for remote control designer, manufacture, maintainer man and dealer.

OPERATION:

1. Open the battery cabin, install the two AA (UM-3, R06) batteries according to the '+' '-' which marked inside of battery box.
2. Move the power supply to 'on' and the red indicator is light.
3. Aim the remote control at the receiver, press the remote control, the light is on and the buzzer, it says the remote control can work natural; if the light is not on and it says the remote control is not work natural.

NOTES:

1. Please turn off the power supply when not use
 2. Avoid of the strong light irradiate the receiver directly.
 3. The product can distinguish if the remote control can emit the signal and infrared, it is not fit for the factory.
- If you want to decode the remote control, please choose our latest product JMY2005 and HYC38 infrared decode instrument.
